** Readme file for data analysis for *"Bridging the Intention-Behavior Gap? The Effect of Plan-Making Prompts on Job Search and Employment*"

**The zipped file "Data.zip" contains one do-file ("AP_final_AEJ.do"), two subfolders ("Data" and "Output") and this Readme file.

The "Data" folder contains the three dta files used in the analysis:

1) final_data1.dta: Baseline survey data from the experiment
2) final_data2.dta: Baseline and endline survey data from the experiment
3) final_data3.dta: Data from observed job search

The AP_final_AEJ.do file creates all of the tables and figures used in the text, appendix, and online appendix using the three dta files.

To replicate the results in the paper, change the directory to the replication folder on your computer and run the do-file.

The output is labelled to be consistent with the paper. For example, the output folder will contain "table_3a.xml" (Table 3: Panel A), "table_2_balance"

Output will be saved in the "Output" folder.

Notes:

- The data and code are compatible with Stata versions 14 and up.
- One command of STATA has to be downloaded before running the do-file Tables: "outreg"
